

SWEET1neLIVE

Website Design & Development Proposal

Premium dining • drinks • live music • events • reservations • online ordering

Prepared by	SpectreTech Limited
Prepared for	GlobalSolutions / Sweet1ne
Project	Sweet1neLIVE
Purpose	Commercial Proposal
Project fee	GBP 500
Target delivery	5 weeks, staged
Date	August 2026

1. Proposal Overview

SpectreTech Limited proposes the design and development of Sweet1neLIVE: a premium, mobile-first website and customer platform for Sweet1ne's evening dining, drinks, live music and events experience. The platform will combine strong visual storytelling with practical customer journeys for reservations, event discovery, online ticket sales, venue-hire enquiries, and food orders for collection.

The goal is to create a digital destination that immediately communicates atmosphere and quality - a website that makes visitors want to experience Sweet1neLIVE, while giving the business direct control over bookings, events, menus and customer-facing content.

2. Project Objectives

- Establish a premium and distinctive online presence for Sweet1neLIVE.
- Showcase dining, drinks, jazz, live bands, live music and events through high-impact visual content.
- Allow customers to reserve tables directly through the Sweet1neLIVE platform.
- Allow customers to discover events and purchase tickets online.
- Allow customers to order eligible food items for collection and pay online.
- Generate venue-hire enquiries through a dedicated customer journey.
- Provide an administration area for managing reservations, events, menus, ticketing and selected website content.
- Create a strong mobile destination for traffic arriving from social media and marketing campaigns.

3. Proposed Website & Customer Experience

3.1 Premium Website Experience

A bespoke responsive website will be created around the Sweet1neLIVE identity. The interface will use premium imagery, video, typography, movement and clear calls to action. It will be optimised for mobile, tablet and desktop, with particular attention to visitors arriving from social media.

3.2 Core Website Areas

Area	Included capability
Home	High-impact introduction, featured food and drinks, upcoming events, live entertainment, reservations and venue-hire calls to action.
Menu	Food and drinks categories, descriptions, prices, imagery, dietary information where supplied, and featured items.
Live & Events	Upcoming experiences, jazz/live-band information, promotional content and event discovery.
Smart Events Calendar	Date-based event browsing with upcoming/past event handling and links to event details.
Event Detail	Event artwork, date/time, description, performer information, booking and ticket-purchase actions.
Reservations	Direct Sweet1neLIVE reservation journey using the custom

Area	Included capability
	booking engine.
Order for Collection	Basket, collection details, Stripe checkout and confirmation.
Venue Hire	Venue presentation and enquiry form for private or organised events.
Gallery / Experience	Visual presentation of the venue, food, drinks, music and atmosphere.
Contact / Visit	Opening information, location and contact details.

4. Custom Reservation & Booking System

Sweet1neLIVE will include its own reservation engine. Reservations will be handled directly by the new platform rather than through SevenRooms or an embedded third-party booking widget.

- Customer selects date, preferred time and party size.
- The system checks configured booking availability and capacity rules.
- Customer submits contact and reservation details.
- Reservation is stored within the Sweet1neLIVE system.
- Customer receives an email confirmation.
- Authorised staff can view and manage reservations through the administration area.
- Booking status can be managed by staff, including confirmed, cancelled and completed states.
- Availability and booking rules can be configured by authorised administrators.

This custom reservation engine is included within the project scope.

5. Events & Online Ticketing

Events are a central part of Sweet1neLIVE. The website will include a smart calendar and dedicated event pages. Online ticket sales are included and will be enabled for events that require paid admission.

- Create, edit, publish and unpublish events.
- Add event dates, times, descriptions, artwork and performer information.
- Show events through a smart upcoming-events calendar.
- Enable paid tickets on selected events.
- Allow customers to choose ticket quantity and complete payment through Stripe.
- Record successful ticket purchases and provide customer confirmation.
- Allow events that do not require tickets to use reservation or information-only journeys.

6. Online Ordering & Stripe Payments

Customers will be able to place eligible food orders for collection through the website. The customer journey will follow: Browse Menu -> Add Items -> Basket -> Collection Details -> Stripe Payment -> Confirmation.

Stripe will be the payment provider for both collection orders and online event-ticket purchases. Raw card details will not be stored by Sweet1neLIVE; payment collection will be handled through Stripe's supported payment flow.

Stripe transaction fees and any third-party service charges are not included in the GBP 500 development fee and remain payable under the relevant provider's terms.

7. Venue Hire

A dedicated venue-hire section will present Sweet1neLIVE as a bookable venue and capture qualified enquiries. The enquiry journey can collect name, email, telephone, event type, preferred date, estimated guest count, requirements and additional notes. Submissions will be routed to the agreed Sweet1ne contact for follow-up.

8. Administration

An administration area will allow authorised Sweet1ne staff to manage the parts of the platform that change frequently.

Management area	Functions
Reservations	View bookings, manage statuses, review booking details and configure relevant availability rules.
Events	Create/edit events, upload artwork, set dates/times, publish/unpublish and manage event information.
Tickets	Set ticket price/availability for eligible events and review recorded purchases.
Menu	Manage items, descriptions, prices, categories, images, availability and featured items.
Website content	Manage selected high-change customer-facing content.
Venue enquiries	Receive and review submitted venue-hire enquiries.

9. Design Direction

The design will be premium, dynamic and visually led, while remaining clear and easy to use. The visual direction will draw from Sweet1ne's existing brand presence and the design references supplied by the client.

- Luxury and exclusivity
- Night-time atmosphere and energy
- High-quality food and premium drinks
- Jazz, live music and social experience
- Strong photography and video
- Elegant motion and transitions
- Clear calls to reserve, buy tickets, order or enquire

10. Content & Client Inputs

To maintain the proposed schedule, Sweet1ne / GlobalSolutions should provide the following promptly:

- Approved Sweet1neLIVE branding and design references.
- Food, drinks, venue, event and performer imagery/video.
- Current menu information and prices.

- Initial event information, ticket pricing and event artwork.
- Opening hours, location and contact details.
- Venue-hire information and enquiry recipient.
- Stripe account/configuration access required for integration.
- Domain/DNS access where required.
- Approved privacy, cookie, alcohol/age and legal wording.
- Consolidated feedback and timely stage approvals.

11. Delivery Plan

The project will be delivered in three controlled stages over a target period of approximately five weeks. This staged approach allows the public-facing experience to progress quickly while the custom booking, commerce and administration functions are completed and tested.

Stage	Target	Primary deliverables
Stage 1 - Experience & Foundation	Weeks 1-2	Discovery, information architecture, visual direction, responsive website foundation, homepage, menu presentation, Live & Events, smart calendar, event pages, gallery, venue-hire journey and core content population.
Stage 2 - Booking, Ticketing & Commerce	Weeks 3-4	Custom reservation engine, booking management, collection ordering, basket/checkout, Stripe integration, online event ticket sales, payment confirmations and core administration functions.
Stage 3 - QA, Launch & Handover	Week 5	End-to-end testing, responsive/browser QA, booking and payment testing, security/performance hardening, production deployment, final refinements and technical handover.

12. Deliverables

- Bespoke Sweet1neLIVE responsive website and UI/UX design.
- Premium homepage and customer-facing content pages.
- Food and drinks menu experience.
- Smart events calendar and event detail pages.
- Custom Sweet1neLIVE reservation engine.
- Reservation administration and management.
- Online event ticket sales.
- Stripe payment integration for tickets and collection orders.
- Collection ordering and checkout.
- Venue-hire enquiry experience.

- Administration for events, menu, ticketing and selected website content.
- Email confirmations for relevant booking and transaction journeys.
- Analytics integration.
- Responsive and browser testing.
- Production deployment and technical handover.

13. Commercial Proposal

The total fixed development fee for the agreed Sweet1neLIVE scope in this proposal is GBP 500.

Payment phase	Trigger	Amount
Payment 1 - Project deposit	On approval / before project commencement	GBP 150
Payment 2 - Stage 2 commencement	Following approval of Stage 1 deliverables	GBP 175
Payment 3 - Final delivery	On completion of Stage 3, before final handover	GBP 175
TOTAL		GBP 500

The first payment secures commencement of the project. Subsequent payments are tied to delivery progress. Third-party transaction fees, subscriptions, hosting charges or provider costs are excluded unless expressly stated otherwise.

14. Acceptance & Revisions

- Each submitted stage should be reviewed within 5 business days where practicable.
- Any rejection should identify a material failure against an agreed requirement so it can be rectified.
- Up to three consolidated design revision rounds are included within the agreed scope.
- Minor defects that do not prevent operational use will be corrected during QA or the agreed post-launch support period.
- Final acceptance requires the agreed functionality to be delivered, critical defects resolved, production deployment completed and handover materials provided.

15. Scope Boundaries

The following are excluded unless separately agreed:

- Native iOS or Android applications.
- POS or delivery-platform integration.
- Advanced reserved seating maps or seat-selection systems.
- Ticket resale marketplace or dedicated ticket-scanning mobile application.
- Delivery-driver or logistics management.
- Loyalty programme or complex promotions.
- Professional photography/videography production.
- Paid advertising management.

- Ongoing content management after handover.
- Third-party subscription, transaction, hosting or usage charges.
- 24/7 infrastructure management or support.

For clarity, the custom Sweet1neLIVE reservation engine, Stripe payment integration, collection ordering and online event ticket sales are INCLUDED in this proposal.

16. Change Management

This proposal defines the agreed project baseline. Normal refinement of approved functionality is expected during design and development. A request that introduces a materially new feature, integration, provider, workflow or significant page/function outside the scope above will be assessed before implementation. Where it changes effort, cost or delivery timing, the impact will be communicated for written approval.

17. Success Criteria

- The website clearly communicates Sweet1neLIVE as a premium food, drinks, live-music and events destination.
- Customers can discover events and complete online ticket purchases.
- Customers can make and receive confirmation of table reservations directly through Sweet1neLIVE.
- Customers can place and pay for collection orders online.
- Customers can submit venue-hire enquiries.
- Authorised staff can manage the agreed operational content and booking/event functions.
- The experience performs effectively on mobile and modern desktop browsers.
- The final platform provides a strong destination for Sweet1neLIVE marketing and social-media traffic.

18. Next Steps

1. Approve the proposal and GBP 500 project fee.
2. Pay the GBP 150 project commencement deposit.
3. Provide initial brand assets, content and access.
4. Confirm the Sweet1ne / GlobalSolutions decision-maker for approvals.
5. Conduct project kickoff and begin Stage 1.

19. Conclusion

Sweet1neLIVE will be built as a complete digital destination for premium dining, drinks, live music and events. The proposal combines a strong visual experience with the practical journeys customers need: discovering events, reserving tables, purchasing tickets, ordering for collection and enquiring about venue hire.

The result should not simply tell customers that Sweet1neLIVE exists. It should make them want to experience it.
