DEVELOPER BUILD SPEC

Website Functional Requirements Proposal v1.3

Two websites · Go-live 8 September 2026

For: Kelvin Kibiru (Lead Software Developer) and Stephen Nyansoho Machera

From: GlobalSolutions

Project: Sweet1ne (GS-SW1-2026-001)

Version: 1.3 - 25 August 2026 (corrected: work split; LIVE as brand extension; PopMenu export + MrLayii visuals; no photo shoot planned)

Document type: The functional-requirements proposal Kelvin asked for. Build from this file.

Status: AUTHORITATIVE for what to build. Supersedes v1.0, v1.1 and v1.2.

Go-live: Tuesday 8 September 2026 — two websites. Sweet1ne (dining) and Sweet1neLIVE (Chadwell Heath). P0 only — section P.

Sequence and payment: Plan v1.3. Dining is in the GBP 2,500 programme. LIVE is extension

GS-SW1-CO-LIVE-2026-001 (GBP 400). QR paused.

Source for LIVE commercial scope: `Formal Documents/Sweet1ne Live/GlobalSolutions_Sweet1neLIVE_Project_Extension_Change_Order_and_Commercial_Invoice_FINAL.pdf` — overlay: do not build the CO's custom booking engine or Stripe food checkout. Toast and SevenRooms stay. Stripe is events/tickets.Current site to replace: <https://www.sweet1ne.com/> (PopMenu). Sweet1ne own the domain. No source-code migration.**Content that must be in the build (do not scrape, do not wait for a food shoot):**

1. **Full PopMenu export** of all materials: copy, menus, NAP, hours, forms, and any media the CMS holds. This is a day-one task.
2. **MrLayii (videographer)** has shared access to Sweet1ne's existing visual library. Use that for hero, venue, and atmosphere. **No photography shoot is planned.**

A. What you are being asked to do (read this twice)

Kelvin asked for **all functional requirements, in a proposal, in full**. This document is that. It is written so you do not need to reverse-engineer PopMenu yourselves.

This phase is not a photographed digital menu.

The live online menu has **almost no dish photos**. There is **no food photography shoot planned**. Use MrLayii's venue/film library and the PopMenu export. `image_url` on dishes stays nullable. **Do not block either website on a dish-photo library.**

This phase is:

1. A **better-looking website** with greater brand appeal than the current PopMenu site.
2. **Maximum SEO** so Google and social traffic land on pages that can rank and be understood.
3. **Maximum click conversion** so those visits become Reserve (SevenRooms), Order (Toast), Catering, Private hire, VIP on the dining site — and Reserve, Order, events, tickets, and venue hire on the LIVE site.

Appeal comes from **each site as a whole** (atmosphere, type, motion, venue film/stills, clarity of CTAs) - not from plating every starter. **Look is not a closed decision.** Developers own design input and aesthetics. This file sets outcomes, not a locked type/colour pack.

Two websites, one organisation. Sweet1neLIVE is not a page on sweet1ne.com. It is an **extension of the existing Sweet1ne brand** for the **new Chadwell Heath venue**: restaurant (food, drinks, luxury menu) plus live jazz/band and music. Same group, distinct site, distinct hostname.

B. Now vs later (do not mix these up)

Now (website v1)	Later (not this sprint)
Replace PopMenu with a high-appeal branded site	Dish photography on every menu item
SEO: crawlable pages, local landing pages, schema, 301s, speed	QR table menu / in-venue visual menu app
Conversion: Reserve, Order collection, enquiry forms, VIP	Native Sweet1ne cart (Toast API Stage C) unless access already exists
Toast collection on dining and LIVE (Chingford = collection only; LIVE delivery unconfirmed — keep collection, leave delivery open)	Native Sweet1ne cart / replacing Toast POS
SevenRooms table widget on all sites	Custom reservation engine
Sweet1neLIVE as a second website (Chadwell Heath restaurant + entertainment) — public destination on 8 Sep	LIVE Stripe food checkout; folding LIVE into /Live
Cross-links both ways; sweet1ne.com/Live 301s to the LIVE hostname	Full LIVE door / ticket-scanning app
Menu as a beautiful, crawlable, typed list (names, descriptions, prices, dietary tags)	Per-dish hero images, "dish theatre" lightbox
Shared platform tables so QR/intelligence can plug in later	Insight engine, bulk email, waiter KDS replacement

If a task does not improve look, SEO, or conversion, it is not v1.

C. Success (how we will judge v1)

The site is successful if:

1. A stranger from Instagram thinks "this looks like a night out" within three seconds - without needing dish photos.
2. Google can index unique pages for Lewisham, Chingford, menus, catering, and hire on sweet1ne.com, and a **separate** LIVE site for Chadwell Heath (the current "Load more content" pattern is hostile to this).
3. Dining clicks complete: **Reserve** (SevenRooms), **Order** (Toast), **Catering submit**, **Private events submit**, **VIP join**. LIVE clicks complete: **Visit Chadwell Heath**, **What's on**, **Reserve** (SevenRooms), **Order** (Toast), **Hire**, **tickets** when events exist.
4. Toast still receives paid orders for the live locations, including LIVE collection. Kitchen screens keep working as today. SevenRooms still takes tables.
5. Nothing operational from the current site is lost (forms, hours, both branches, VIP promise, story).

We are **not** judging v1 on "does every oxtail bao have a photo".

D. Problem (why the current site fails)

Live site audit 24 August 2026:

- PopMenu template. Dark, but average. Footer: "Made with Popmenu".
- Hero film exists; below the fold is weak; "Load more content" delays content (bad for SEO and conversion).
- Menu tabs exist (Menu / Gambino Lunch / Drinks) with written dishes and almost **no photos**.
- Contact is Lewisham-heavy. Chingford is easy to miss.
- Takeaway is a Toast wrap, not a branded conversion journey.
- VIP/Sign In is PopMenu's list, not Sweet1ne's.
- No Sweet1neLIVE identity (LIVE is a third venue, not a hidden nav item).
- PopMenu is going away. Domain stays.

Sweet1ne are extravagantly unique on social. The website must catch up **as a conversion and discovery machine**, then photography can make the menu cinematic later.

E. How the website sits in the centralised system

The websites are not throwaway brochures. They are the **first public surfaces** of the platform you are already building.
Two hostnames, one backend.

```
Guest (Google / Instagram / TikTok)
|
+-- sweet1ne.com           Lewisham + Chingford dining
+-- [LIVE hostname]       Chadwell Heath restaurant + entertainment
|
v
Shared backend (Next.js, FastAPI, Supabase, Redis, Resend)
|
+-- menu_items (text now; images later; surface dining|live)
+-- leads (VIP, catering, dining hire, LIVE hire)
+-- analytics_events (every conversion click)
+-- live_events, tickets [LIVE CO – Stripe]
|
+-- Toast POS (Lewisham, Chingford, Chadwell Heath) [do not replace]
+-- SevenRooms widget (all three venues) [do not rebuild]
+-- Stripe – LIVE events / tickets only [GS-SW1-CO-LIVE-2026-001]
+-- later: QR menu, intelligence
```

Same menu_items rows will gain image_url later. Design the menu component to look premium **with text only**, and to accept an image when the field is filled. No second menu system.

F. Operations you wrap - you do not replace

F1. In the restaurant (Toast)

1. Waiter takes the order.
2. Waiter enters it in **Toast POS**.
3. Kitchen screen notifies automatically.
4. Kitchen cooks.
5. Waiter is notified by radio, bell, and concourse alert.
6. "Delivered" is often spoken, then the system is updated.

Do not build a waiter app or a second KDS. Toast stays the in-house system.

When Toast Web access arrives: list location GUIDs for **Lewisham, Chingford, and Chadwell Heath (LIVE)**, Online Ordering on/off, collection vs delivery, auto-fire device, and whether Toast Tables / Online Ordering Pro / Websites is on the account.

F2. Online orders

Branch	Rule
Chingford	Collection only. No delivery. Toast.
Lewisham	Toast. Collection yes. Delivery: read from Toast, do not guess.
Chadwell Heath (LIVE site)	Toast, same capacity. Collection yes. Delivery not confirmed — keep collection; if Toast later has delivery, show it. Do not hard-code “no delivery” for LIVE.

Order implementation (do not skip to a custom checkout):

- **Stage A (v1):** branded location picker + Order that opens that location's Toast Online Ordering. Dining site: Lewisham / Chingford. LIVE site: Chadwell Heath. Style as far as Toast allows.
- **Stage B:** Toast storefront on our URLs if the Toast package allows.
- **Stage C:** native cart via Toast APIs = change request unless partner access already exists.

No custom card payments for **food** on either site. If a location cannot take a Toast order on launch day and it can today, **do not cut DNS**. LIVE **events and tickets** use Stripe (Change Order). LIVE **food** stays on Toast.

Chingford UI must never show delivery, driver tracking, or a delivery address field.

G. Two websites, one organisation

Do not build Sweet1neLIVE as /live on the dining site. Guests must land on a **different website**. Shared platform, shared CMS family, two public brands.

G1. Sweet1ne (dining) — sweet1ne.com

Soul food restaurant and lounge. Story: Fairlop 2020 -> Lewisham 2023 -> Chingford. Line: "Experience a setting where soul meets food." Social is how they grow (historically most Ilford trade came via social).

Locations (this site only):

- Lewisham: 2 Loampit Hill, SE13 7SW, 020 3340 6750
- Chingford: 164 Station Road, E4 6AN, 020 3971 3449
- Email: info@sweet1ne.com
- Instagram: instagram.com/ssweet1ne
- Facebook: facebook.com/sweet1ne
- TikTok: tiktok.com/@sweet1ne

Lewisham hours on the current site (confirm before launch): Mon-Tue closed; Wed-Thu 15:00-23:00 (kitchen 21:45); Fri-Sat 13:00-23:00 (kitchen 21:45); Sun 13:00-21:00.

Dining home must **send evening/music traffic to the LIVE site** (named, linked). Do not describe Chadwell Heath as a third dining branch of sweet1ne.com.

G2. Sweet1neLIVE — brand extension, separate hostname

Locked: Sweet1neLIVE is an **extension of the existing Sweet1ne brand**, not a different company and not a /live page. New venue: **218 High Road, Chadwell Heath, RM6 6LS**.

Locked	Meaning		
Brand	Same organisation, more luxury presentation. Menu updates will be shared.		
Menu	Mostly similar to dining, with a few differences to be explained later. Flag items dining \	live \	both.
What it sells on the site	Quality food, drinks, jazz / live band / live music , upcoming events, venue hire. Guests should feel it is a great place for both food and a night out .		

Locked	Meaning		
What it does not sell or imply	No shisha. Do not use “adult entertainment”. That phrase is an exaggeration and must not appear on the site or in copy.		
Look	Premium, dynamic, eye-catching, extravagantly unique. Reference examples will be outlined separately. Developers own the execution.		
Commercial	Change Order GS-SW1-CO-LIVE-2026-001 , GBP 400. Not folded into the GBP 2,500 dining fee.		

- **Operator (licence):** Sweet Smoke by Sweet1ne Ltd (registered at 164 Station Road — Chingford dining address). Do not publish the Chingford restaurant as the LIVE venue.
- **Hostname (open):** confirm domain. Until then, distinct host. `sweet1ne.com/live` **301s to the LIVE origin.**

8 September P0:

1. Own hostname, own nav, own footer.
2. Chadwell Heath NAP, hours (when supplied), map, click-to-call. Schema: Restaurant plus live-music venue as appropriate — **not** NightClub-as-adult-venue copy.
3. Home: food, drinks, jazz/live music, events, hire. Link back to `sweet1ne.com`.
4. Menu as editorial text (luxury presentation; differences when supplied).
5. **Smart events calendar** (CMS; empty state if no events yet). Ticket purchase via Stripe when an event is on sale.
6. Venue hire enquiry (`source=website_live_hire`).
7. Reserve: **SevenRooms widget**. Confirmations are **email, via SevenRooms** — we do not build SMS booking mail.
8. Order collection: **Toast**.
9. Admin: menu and events editable in the dashboard.
10. Gallery from **MrLayii's** library. No dish-photo shoot.

G4. What a visitor can actually do (locked)

Can they...	LIVE site	Dining site
Reserve a table online	Yes — SevenRooms widget. Confirmation email from SevenRooms.	Yes — same widget, that branch
Buy event tickets	Yes — Stripe	No
Send a venue-hire enquiry	Yes — form	Dining hire form (existing private events)
Pay for food / collection on the website	Yes — Toast	Yes — Toast (Chingford collection only)
Update menu and events	Staff admin dashboard (not the public site)	Staff admin for dining menu/hours/copy
Booking SMS	No — email via SevenRooms	No — email via SevenRooms
Age / alcohol	Responsible alcohol presentation. No “adult entertainment” age-wall.	Same
Anything else	None so far	—

Do not invent extra products (shisha, guest list, door app, SMS, custom booking engine).

G3. Payments and booking — same stack on both sites

Site	Food / collection	Tables	Events / tickets
sweet1ne.com (Lewisham, Chingford)	Toast. No custom card stack. Chingford collection only.	SevenRooms widget	Not this site
Sweet1neLIVE (Chadwell Heath)	Toast , same capacity. Collection yes. Delivery unconfirmed.	SevenRooms widget	Stripe (CO)

H. Visual appeal for v1 (without dish photos)

This is the look work. It is in scope. Dish photos are not. **The aesthetic is not a closed decision.** Kelvin and Stephen own design input: type, colour, motion, layout. GlobalSolutions will review, not prescribe a font pack.

Extract (required): full **PopMenu export**; **MrLayii** visual library (already shared). Current PopMenu fonts and colours are **reference**, not a must-ship system.

Observed on the live PopMenu site (24 Aug 2026) — optional reference only:

- Playfair Display (headlines); Montserrat / futura-pt / Proxima-Nova (UI)
- Background rgb(51, 51, 51), ivory text, gold #D4AF37

v1 look (must ship — outcomes, not a locked style):

1. Clearly better than the current PopMenu template. Not a generic white restaurant theme. Not PopMenu chrome.
2. Two surfaces in one family: dining vs LIVE (brand extension: food, drinks, jazz/live music). Premium, dynamic, extravagantly unique. Reference examples will be outlined separately.
3. Full-viewport **hero** (existing film or sequenced venue stills). Pause + mute. No autoplay sound.
4. **Venue** film and stills from **MrLayii's** library. Food plates wait — no shoot is planned.
5. Menu page: premium **typography layout** - category, name, description, price, tags - readable, complete in the HTML (for SEO). If `image_url` is null, no broken frame.
6. Sticky mobile bar: Reserve | Order. Always visible after first scroll (dining and LIVE).
7. Do **not** copy PopMenu's "Load more content".

v1 look (must not ship):

- Empty grey boxes labelled "photo coming soon" on every dish
- Blocking promo modal on every visit (use a banner or once-per-session)
- PopMenu branding
- A second, custom booking UI that replaces SevenRooms
- "Adult entertainment", shisha, or copy that implies either

Later: `image_url` on `menu_items`; dish detail with photo; optional "dish theatre". Schema and components must already accept an image so this is a content drop, not a rebuild.

I. Conversion (the point of the clicks)

Primary conversions, in order of commercial value:

Rank	Conversion	Success event
1	Reserve a table	<code>reservation_completed</code> (or <code>reservation_handoff</code> if provider is third-party)
2	Order collection	<code>order_handoff_to_toast</code> then paid on Toast
3	Dining private hire	<code>form_lead_submitted</code> source hire
3b	LIVE venue hire	<code>form_lead_submitted</code> source <code>website_live_hire</code>
4	Catering	<code>form_lead_submitted</code> source catering

Rank	Conversion	Success event
5	VIP	<code>vip_opt_in</code>
6	Call / directions	<code>click_to_call, click_directions</code> (assisted conversion)

I1. Funnels you must implement

Reserve (P0) Land -> choose venue (skip if remembered) -> Reserve CTA -> **SevenRooms widget**. Table confirmations are **email from SevenRooms** (not SMS, not a mailer we build). Dining deep links: `/reserve/lewisham`, `/reserve/chingford`. LIVE: `/reserve` on the LIVE host (Chadwell Heath). If the widget cannot embed: designed interstitial to SevenRooms, then return. Never dump the guest on a raw third-party homepage. Do **not** build a custom diary or availability engine.

Order (P0) Dining: land -> choose branch -> Order -> Chingford = collection only -> Toast for that GUID. LIVE: Order -> Toast for Chadwell Heath (collection; delivery left open). Deep links: `/order/lewisham`, `/order/chingford`; LIVE `/order`. Closed branch: show next open time, disable Order, offer Reserve if dining is open.

Catering (P0) Host CTA -> `/catering` -> fields below -> thank you + email ops + leads.

Private events (P0) Host CTA -> `/private-events` -> fields below including Location -> thank you + leads.

LIVE (P0 = second website on 8 Sep) Dining home LIVE entry -> **LIVE hostname** -> food, drinks, jazz/live music, smart events calendar, hire, Reserve (SevenRooms), Order (Toast), Stripe tickets when an event is on sale.

VIP (P0) Non-blocking strip on menu and footer. Name, email, mobile, preferred branch, marketing consent, SMS consent separate. Sweet1ne-owned list. Do not rebuild PopMenu Sign In unless there is a real account benefit.

I2. Conversion UX rules

- One primary CTA per view. Dining home: Reserve (primary) + Order (secondary). LIVE home: Reserve / Order / What's on — food and live music, not "adult nightlife".
- Branch choice is the only extra step before Reserve/Order. Remember it.
- Instagram/TikTok traffic is mobile. Thumb-reach CTAs. No hover-only actions.
- Forms: visible labels, errors inline, submit disabled until required fields valid, no silent fail.
- Do not make the guest hunt Chingford.
- Promo CMS can point at Reserve or Order. Do not cover the hero CTAs.

I3. Current forms - reproduce exactly, then add consent

Catering (required unless noted): First name, Last name, Email, Phone, Desired date and pickup time, Number of servings, Additional comments (optional). Add: branch/pickup location, marketing consent (off by default), `source=website_catering`.

Private events (required unless noted): Location, First name, Last name, Phone, Email, Type of event, Start date and time, Number of hours, Size of party, Additional comments (optional). Add: marketing consent, `source=website_private_hire`. Location values: Lewisham, Chingford (dining hire). LIVE hire is on the LIVE site, not this form.

Both: email `info@sweet1ne.com` (until a dedicated inbox) **and** insert into Leads. Show a confirmation page.

Copy to keep for VIP: "Be the first to receive updates on exclusive events, secret menus, special offers/discounts, loyalty rewards & more!"

J. SEO (maximum output - this is a v1 workstream, not a polish pass)

The current site is weak for SEO: delayed content, thin location pages, little unique copy per branch, menu not fully in the first HTML.

J1. Technical SEO (P0)

ID	Requirement	
FR-SEO-01	Dining hostname remains sweet1ne.com. 301 every current PopMenu path (table below). LIVE is a second origin ; do not fold LIVE SEO into dining paths.	
FR-SEO-02	Server-render (Next.js SSR/SSG) all public marketing and menu pages. Menu names, prices, descriptions must be in the first HTML response - not client-only, not behind "Load more".	
FR-SEO-03	Unique <title> and meta description per URL. Pattern: primary intent + brand + location where relevant. Example: `Soul food restaurant in Lewisham`	Sweet1ne`.
FR-SEO-04	One H1 per page. Location pages H1 includes the area name (Lewisham / Chingford). LIVE H1 includes Chadwell Heath or Sweet1neLIVE.	
FR-SEO-05	Canonical URL on every page. No parameter duplicates for branch (use path /locations/lewisham not ?branch= as the canonical).	
FR-SEO-06	Dining sitemap.xml lists dining URLs. LIVE has its own sitemap on the LIVE origin. Submit both after go-live.	
FR-SEO-07	robots.txt allowing Google; do not noindex the menu. Admin /admin disallowed.	
FR-SEO-08	Open Graph + Twitter cards: venue still or hero frame, not a logo on white. Unique OG image per location if assets exist.	
FR-SEO-09	Core Web Vitals: LCP from hero must be optimised (poster image, compressed film, no blocking popup). CLS: reserve space for header/CTAs. INP: CTAs respond immediately.	
FR-SEO-10	XML + HTML 404. Redirect map tested before DNS cutover.	
FR-SEO-11	hreflang not required (English UK only). lang="en-GB".	
FR-SEO-12	Fast mobile. PopMenu lazy-load pattern is forbidden.	

J2. Local SEO (P0)

ID	Requirement
FR-SEO-13	Separate indexable URLs: /locations/lewisham and /locations/chingford with full NAP (name, address, phone), hours, map, CTAs.
FR-SEO-14	NAP must match Google Business Profile exactly (spacing, SE13 7SW vs SE137SW - use the official GBP string once provided).

ID	Requirement
FR-SEO-15	JSON-LD Restaurant per location: name, address, geo, telephone, url, image, openingHoursSpecification, servesCuisine, menu URL, sameAs (Instagram, Facebook, TikTok).
FR-SEO-16	LIVE site: Restaurant JSON-LD for 218 High Road, Chadwell Heath RM6 6LS , plus live-music/event markup where it fits. Do not frame the venue as adult entertainment. Do not use Lewisham or Chingford as the LIVE address.
FR-SEO-17	Click-to-call and Maps links (Google + Apple). Track as events.
FR-SEO-18	Embedded Google Map per location.

Target queries (write copy that naturally covers these; no keyword stuffing):

- Sweet1ne, Sweet 1ne, Sweet1ne Lewisham, Sweet1ne Chingford
- Soul food London, Afro Caribbean restaurant Lewisham / Chingford
- Gambino Lunch
- Sweet1ne LIVE, Chadwell Heath, late night, live music, venue hire (**LIVE site only**)

J3. On-page / content SEO (P0)

ID	Requirement
FR-SEO-19	Story page keeps the owned heritage copy (Fairlop / Lewisham / Chingford). Unique, crawlable prose.
FR-SEO-20	Menu categories and items as real headings/text. Starters intro copy kept.
FR-SEO-21	Internal links: every dining location page links to that branch's Reserve, Order, Menu. Dining home links to both locations and to the LIVE origin (absolute URL). LIVE home links back to sweet1ne.com.
FR-SEO-22	Dining slugs: /menus, /our-story, /catering, /private-events. LIVE slugs live on the LIVE host (/ , /menus, /events, /hire, /reserve, /visit).
FR-SEO-23	Image alt text on venue/hero assets that we do have. Dish images: N/A until later.
FR-SEO-24	FAQ block on location pages (hours, collection, parking if known) as FAQPage schema only with approved copy.

J4. URL map (301)

Current	New (keep old via 301)
/	/
/menu	/menus and keep /menu
/about	/our-story and keep /about
/catering	/catering
/private-events	/private-events
/contact	/contact and /locations
/reservations	/reserve (keep /reservations)
/popmenu-order	/order
/reviews	/reviews
/accessibility	/accessibility
/live or any LIVE-sounding dining path	301 to the LIVE hostname (not a dining subpage)
(new)	/order/lewisham, /order/chingford
(new)	/reserve/lewisham, /reserve/chingford
(new)	/locations/lewisham, /locations/chingford

GA4 + Meta pixel **after** cookie consent. Conversion events listed in section I.

K. Page-by-page functional spec (v1)

Home /

Job: appeal + split traffic to Reserve, Order, locations, and the **LIVE website**.

Must: hero, headline in current voice, Reserve + Order, branch switcher (Lewisham / Chingford only), prominent entry to Sweet1neLIVE (Chadwell Heath: brand extension — food, drinks, jazz/live music), equal Lewisham/Chingford teaser, Host teaser, VIP, CMS promo banner.

Must not: blocking popup every visit; dish photo grid (no assets). Venue stills / film only.

SEO: title around Sweet1ne soul food London; H1 brand; links to both location URLs.

Locations /locations, /locations/[branch], /contact

Job: local SEO + call/directions/reserve/order.

Must: equal-weight branches; photo of **room** if we have one (not a dish); address; hours; kitchen last orders; phone; map; Reserve; Order; Menu.

Contact can be the same data as locations (do not hide Chingford).

Menus /menus

Job: conversion to Order or Reserve + crawlable menu content.

Must: branch switch; services Menu / Gambino Lunch / Drinks; categories; name; description; price; dietary/allergen tags; search; 86 as unavailable; CTA Order collection or Reserve.

Must not: require images. Layout must look finished as type. If `image_url` is null, do not show a broken frame.

SEO: all items in HTML; unique title including branch if the URL is branch-scoped.

Reserve /reserve

Choose location -> **SevenRooms widget** for that venue. Identify current SevenRooms destinations before cutover. Do not build a booking diary.

Order /order

Choose location -> Toast. Chingford collection locked. LIVE order lives on the LIVE host.

Our Story /our-story

Heritage copy + gallery of **venue** images that exist. CTA Reserve / Host.

Catering /catering and Private events /private-events

As forms in I3. Copy should sell the lounge, not only the form.

LIVE site (separate origin — not a dining page)

Job: make someone want to eat well and hear live music in Chadwell Heath.

Must: own hostname; 218 High Road RM6 6LS; brand-extension look; luxury/similar menu; smart events calendar; hire form; SevenRooms; Toast collection; Stripe tickets; MrLayii visuals; admin for menu + events. **Must not:** shisha, "adult entertainment", custom booking engine.

VIP, Reviews, Privacy, Accessibility

VIP: own list. Reviews: real quotes/Google, no fake 5.0. Privacy + cookies. Native a11y (WCAG 2.2 AA target), no overlay widget.

Admin (staff)

Hours, closures, tonight, promos, copy, **MrLayii** gallery assets, menu text/86/prices, **LIVE events calendar**. Dish `image_url` may exist in CMS unused — not shown on front if empty. No food shoot is planned.

L. Menu data model (text now, photos later)

```
menu_items:
  id, branch_id, surface (dining|live|both),
  service (menu|gambino_lunch|drinks),
  category, name, description, price,
  allergens[], dietary_tags[], spice, badges[],
  available,
  image_url nullable,    -- unused on front until phase 2
  toast_item_id nullable,
  sort_order
```

Front: if `image_url` empty, render the editorial text row. If filled, show image. **One component, two states.** That is the only photography integration work now - do not build a gallery UI for dishes.

Keep name **Gambino Lunch** until told otherwise. Extract dish names/descriptions from the current site; they are owned content.

M. Analytics events (conversion measurement)

Fire at least:

```
page_view, branch_selected, cta_reserve_click, cta_order_click, order_handoff_to_toast,
reservation_handoff, lead_submitted (with source), vip_opt_in, click_to_call, click_directions,
live_entry_click, menu_item_click (even without photo).
```

Every event includes `branch_id` and `surface` (dining|live) where known.

N. Functional requirements list (v1 priorities)

P0 = go-live. P1 = same phase if time/assets. P2 = later. Paused = QR.

Platform: FR-PLAT-01 shared Next.js/FastAPI/Supabase app. FR-PLAT-02 branch-scoped data. FR-PLAT-03 remember branch. FR-PLAT-04 CMS. FR-PLAT-05 QR paused, schema-ready only.

Look: FR-XP-01 three-second brand hit without dish photos — **developer-led look**, not a locked type/colour pack. FR-XP-02 Instagram -> Reserve/Order in two taps. FR-XP-03 sticky Reserve | Order. FR-XP-04 hero film/stills. FR-XP-05 dish theatre **P2**. FR-XP-06 tonight strip P1. FR-PERF-01 no Load more.

Home / loc / menu / reserve / order / forms / VIP / Toast / SEO: as sections I-K. Chingford collection-only. FR-ORD-02. No custom **food** card payments. FR-ORD-04. SevenRooms on all sites. LIVE Stripe = events/tickets only.

Photos: FR-PHOTO-01 unused until assets exist. FR-PHOTO-02 (P0) never show empty image frames. FR-PHOTO-03 (P0) use **MrLayii** + PopMenu export for v1 appeal. No dish-photo shoot planned.

O. Work split

Stephen — Sweet1ne dining website (`sweet1ne.com`): look, home, both location pages, editorial dining menu, forms, sticky bar, dining CMS screens, dining Toast + SevenRooms widgets, mobile pass for dining.

Kelvin — Sweet1neLIVE + shared platform: repo, CI, two origins, schema, sitemaps, 301s, CWV, **full PopMenu export into the platform**, LIVE hostname, LIVE pages, smart events calendar, Stripe tickets, LIVE Toast + SevenRooms, LIVE CMS (menu + events), DNS/cutover, review against this file.

Stephen consumes the export and MrLayii assets for dining. Kelvin consumes them for LIVE. Shared backend, two public sites.

Do first: PopMenu export + MrLayii pull; dining locations; LIVE host shell; Toast/SevenRooms.

Do not first: dish photo grid, QR, custom checkout, custom booking engine, treating LIVE as /Live, adult-entertainment framing.

P. Acceptance - website v1

1. Looks like Sweet1ne without relying on plated-food shots. Look is developer-led; GlobalSolutions reviews, does not prescribe fonts.
2. Lewisham and Chingford both complete for NAP, hours, Reserve (SevenRooms), Order (Toast), Menu.
3. Chingford order path is collection only into Toast.
4. Lewisham Toast path does not regress. LIVE Toast collection works in the same capacity; delivery left open.
5. Menu is fully in HTML, readable, no broken image boxes.
6. Forms match current fields + consent, email + leads.
7. VIP is Sweet1ne-owned.
8. All 301s and location schema live. Sitemap submitted.
9. Sticky mobile Reserve | Order works. Funnels in section I complete.
10. Lighthouse/CWV passable on mobile (no blocking popup, hero optimised).
11. Conversion events firing.
12. Sweet1neLIVE is a **separate website** (brand extension) on its own hostname for Chadwell Heath. Food, drinks, jazz/live music, events, hire. Dining home links to it. sweet1ne.com/Live 301s to LIVE.
13. No PopMenu chrome. No custom reservation engine. No Stripe food checkout. No shisha. No “adult entertainment” copy.
14. Visitors can do what G4 lists: SevenRooms reserve (email confirmations), Toast collection, Stripe tickets, hire form, staff admin for menu/events.

Q. Open items (GlobalSolutions / Sweet1ne, not blockers for starting look+SEO)

1. Toast GUIDs: Lewisham, Chingford, **and LIVE (Chadwell Heath)**. Lewisham delivery yes/no. LIVE delivery unconfirmed — leave open.
2. SevenRooms widget destinations / embed codes for all three venues.
3. LIVE hostname (domain vs subdomain). Address is locked: 218 High Road, Chadwell Heath RM6 6LS.
4. Chingford dine-in hours confirmation.
5. **MrLayii** visual library already shared — use it. **No food photography shoot is planned.**
6. LIVE luxury menu differences (when Sweet1ne send them).
7. GBP NAP strings to copy exactly (dining + LIVE).
8. Waltham Abbey Toast listing - ignore unless confirmed.
9. Privacy copy sign-off (dining and LIVE).
10. Stripe account access for LIVE **tickets**.
11. First LIVE events list and ticket prices.
12. Design references to outline (premium / extravagantly unique).

R. Related files

- This file (**v1.3**) is the build spec. **Stephen** builds sweet1ne.com. **Kelvin** builds Sweet1neLIVE and the shared platform. PopMenu export + MrLayii visuals. Toast + SevenRooms. Stripe = LIVE tickets. Look is developer-led.
- **Go-live 8 September 2026:** both sites public.
- Dining GBP 2,500 (Plan v1.3). LIVE GBP 400. Aggregate GBP 2,900 excluding third-party charges.

End of v1.3. If it is not in this document and is not a small copy tweak, it is a change request. No dish-photo shoot is planned. Sweet1neLIVE is a brand-extension website (GS-SW1-CO-LIVE-2026-001), not a dining subpage and not adult entertainment. Do not replace Toast or SevenRooms.
